
Industrial Roller

Industrial Roller

- Packing and transportation Inspect the quality machines to be well packed

Designated transportation company for safely transportation

Mechanical processing

Design according to the application requirements

45# steel, 38CrMoAlA, 42CrMo, 60CrMoV materials are available

as options for different components

Roller surface treatment

Quenching with Subsequent tempering, ensures the den-sity of the structure

Outer surface deeply quenched, the hardness can reach

HRC 50-55

Surface electrolyze hard chromed, the hardness can reach HRC 58-65

Surface treatment

Mirror roller, super mirror roller grinding and polishing processing We can process different kinds of roller surfaces, such as leather veins, matt, mist, frosting, net veins. And we can The surface is sprayed by Teflon, different kinds of rubber rollers.
